

GleanMark

Examiner Knockout Clearance Report

GLEANMARK

Nice Classes: 042, 045

Expanded to 48 coordinated classes

CONFIDENTIAL — NOT LEGAL ADVICE

Generated May 30, 2026

This report covers USPTO federal registrations, domain availability, and web presence only. State trademark registrations and international trademark offices are not included in this analysis.

Risk Assessment

Significant Concerns

The initial knockout scan flagged 3 very-high-similarity matches and 14 high-similarity matches in your filing classes. Closer DuPont review on each — including **GLEAN** — came back at moderate concern, suggesting the heuristic overweighted the surface name match relative to the goods/services context. The .com is registered to another party, though 4 alternate domains (.ai, .co, .io, .app) remain available. Some online use of similar names was found — worth reviewing for marketplace overlap.

Recommended next step: Proceed with caution — file with awareness of **GLEAN** prosecution and monitor for an Office Action.

Searched as: **GLEANMARK** -> words: **glean, mark** (AI-decomposed) -> sounds like: **KLNMRK**

Based on 11 examiner-style search methods across 48 classes (your 2 + 46 coordinated). 173 marks evaluated | 27.1s

Search Steps Performed

Step	Strategy	Description	Hits Found
1	Phonetic	Phonetic match (full mark): METAPHONE=KLNMRK, DMETAPHONE=KLNLM, SOUNDEX=G456	205
2	Trigram	Trigram similarity: gleanmark (threshold 0.3)	100
3	Class+Component	Components in coordinated classes: glean, mark in classes 001,002,003,004,005,006,007,008,009,010,011,012,013,014,015,016,017,018,019,020,021,022,023,024,025,026,027,028,029,030,031,032,033,034,035,036	540*
4	Word Phonetic	Per-component phonetic: glean, mark	200
5	Foreign Translation	Related concepts: harvest	215
6	stripped_prefix_5	Stripped-first-5 prefix: glean* (article-stripped: gleanmark)	20
7	suffix_dominant	Suffix wildcard with dominant word: %glean	11
8	wildcard_class	Wildcard prefix-compound: glean, mark	213
9	extras_near_or_compact_containment	Extras near-match: phonetic Lev1 (METAPHONE=KLNMRK) + compact-variant containment rescue	25
Unique marks after deduplication			1,237

Executive Summary

Overall, **GLEANMARK** presents a **high clearance risk**, driven principally by multiple live **GLEAN** marks in Class 42 and the strong possibility that the USPTO would view **GLEANMARK** as a trademark-focused extension of an existing **GLEAN** software brand.

The most significant conflicts are **GLEAN** (GLEAN TECHNOLOGIES, INC.), with DuPont scores of **81/100**, **78/100**, and **74/100**. These are the strongest citations because **GLEAN** is incorporated in full at the beginning of **GLEANMARK**, and “MARK” is highly suggestive for trademark-related software and services, leaving **GLEAN** as the dominant source-indicating element. The overlap in Class 42 is also meaningful: both parties offer online non-downloadable software, search/retrieval or analysis functionality, and AI-enabled tools delivered through similar SaaS channels. The Class 45 trademark and IP services do not sufficiently narrow the commercial impression where the mark similarity is this strong.

A further notable conflict is **GLEAN** (GLEAN IP HOLDINGS INC.), scored **62/100**. While the goods/services are less closely aligned, the mark similarity remains substantial, and the coexistence arguments would depend heavily on the narrower trademark/IP focus of the proposed services. Other **GLEAN** registrations appear less problematic where they cover specialized, unrelated fields.

From a web and domain perspective, **gleanmark.com** appears in active use by the applicant, but that does not mitigate trademark risk; separately, the **.com** is commercially used, while **.app**, **.ai**, **.io**, and **.co** remain available. No Doctrine of Foreign Equivalents issue appears to be implicated here.

Examiner Knockout Search Report — GLEANMARK

Web Presence

Impact: Moderate

The applicant's own use of 'GLEANMARK' for trademark searching, clearance, monitoring, and portfolio management software (Class 042) and services (Class 045) is evident through gleanmark.com and glean.name. Third-party results show 'Glean IP Holdings' using 'GLEAN' for AI software/SaaS with a focus on IP and trademark portfolios, and 'Glean Technologies' using 'Glean' for an AI work assistant and platform. While 'Glenmark Pharmaceuticals' is phonetically similar, its pharmaceutical industry is entirely unrelated. The name 'Gleanmark' is somewhat suggestive of gathering information about trademarks.

Examiner Knockout Search Report — GLEANMARK

DuPont Likelihood of Confusion Analysis

The following marks were selected for in-depth analysis using the six most impactful DuPont factors to assess likelihood of confusion with your proposed mark.

GLEAN

78/100 — HIGH

GLEAN TECHNOLOGIES, INC. — Classes 042

GLEANMARK presents a high likelihood of confusion risk with the existing registered mark GLEAN. The key driver is the mark similarity: GLEAN is incorporated in full at the beginning of GLEANMARK, and the additional term MARK is highly suggestive in the trademark field, making GLEAN the dominant source-indicating element. The parties' Class 42 software offerings are also commercially related because both involve online non-downloadable software, search functionality, and AI-enabled tools delivered through overlapping technology channels. Although GLEANMARK includes trademark-specific legal-tech services in Classes 42 and 45, that limitation does not sufficiently overcome the strong similarity in the marks and the overlap in software delivery models.

Similarity of the Marks

90

GLEANMARK wholly incorporates GLEAN as its leading and dominant element, and consumers generally focus on the first portion of a mark. Visually, the only difference is the addition of MARK, which does little to distinguish the source impression because it is a common, highly suggestive term in the applicant's trademark-focused business. Phonetically, GLEAN and GLEANMARK share the identical opening syllable and cadence, and consumers encountering the marks in ordinary marketplace conditions are likely to perceive GLEANMARK as a line extension, product variant, or sub-brand of GLEAN. In connotation and commercial impression, both marks suggest gathering, finding, or extracting useful information, with GLEANMARK simply signaling a GLEAN offering tailored to marks or trademarks.

Goods/Services Relatedness

80

The overlap in Class 42 is substantial because both parties offer online non-downloadable software and temporary-use software tools centered on searching, retrieving, and analyzing information. GLEAN covers software for searching and obtaining electronic documents, messages, webpages, digital content, enterprise resources, and AI chatbot functionality, while GLEANMARK covers SaaS for trademark searching, clearance analysis, monitoring, portfolio management, AI analysis of trademark and intellectual property data, and office-action response drafting. These goods and services are not identical in subject matter, but they are closely related as specialized information-search and AI-enabled software services delivered in the same software-as-a-service category. GLEANMARK's Class 45 services add legal and IP consulting dimensions, but those services are complementary to the applicant's Class 42 software and reinforce a technology-enabled information retrieval and analysis offering.

Trade Channels

72

The identified services travel through overlapping modern software channels, particularly online platforms, subscription-based SaaS delivery, and direct business marketing over the internet. GLEAN's identified enterprise search and AI chatbot software is offered to organizations seeking internal information retrieval tools, while GLEANMARK targets users seeking trademark and IP search, monitoring, and analysis tools, including legal professionals and brand teams. Even if the end-use cases differ, both marks are encountered by business users, legal operations teams, compliance personnel, and knowledge-management functions that procure software solutions online. Because neither identification contains strong channel restrictions, the USPTO would presume ordinary trade channels for Class 42 software services, which increases channel overlap.

Consumer Sophistication

40

The relevant purchasers are likely more sophisticated than ordinary retail consumers because the services involve enterprise software, SaaS subscriptions, legal-tech tools, and intellectual property workflows. Buyers of trademark clearance, monitoring, AI analysis, and enterprise search software typically exercise at least moderate care, often reviewing demonstrations, integrations, security, functionality, and pricing before purchase. That sophistication weighs against confusion to some extent, especially for high-value B2B software and legal service engagements. However, even sophisticated purchasers are not immune where highly similar marks are used for related software services, particularly when one mark fully subsumes the other.

Strength of Existing Mark

68

GLEAN appears inherently distinctive for software services because it is not descriptive of searching and retrieving digital information in any direct or immediate way. At the same time, the term has a recognized dictionary meaning relating to gathering or collecting, which gives it a suggestive quality in the context of information extraction, search, and knowledge retrieval services. That makes GLEAN a moderately strong mark rather than an exceptionally broad one. Its live registration in Class 42 for search, retrieval, and AI chatbot software still entitles it to meaningful protection, especially against marks that copy GLEAN in full as the dominant element.

Crowded Field

45

On the present record, there is no evidence of a heavily crowded field of GLEAN-formative marks for Class 42 software or adjacent legal-tech services. Without significant third-party use or registrations showing that consumers are accustomed to distinguishing among many GLEAN marks, the registrant retains a normal scope of protection. The suggestive flavor of GLEAN for information-gathering tools slightly narrows that scope, but not enough to permit another party to adopt GLEANMARK for related SaaS offerings. This factor therefore provides only limited support for coexistence.

Recommendation: Significant risk of an Office Action. The strongest coexistence arguments would focus on the narrowed subject matter of GLEANMARK to trademark clearance, monitoring, portfolio management, and Class 45 legal-information services, along with the more specialized legal-professional customer base and more careful purchasing conditions. Even so, because GLEAN is the dominant element and the Class 42 SaaS identifications are commercially related, the applicant should prepare for a Section 2(d) refusal and develop evidence of distinct trade channels, purchaser sophistication, and the suggestive nature of GLEAN in search-related software.

GLEAN

74/100 — HIGH

GLEAN TECHNOLOGIES, INC. — Classes 042

GLEANMARK presents a substantial likelihood of confusion with the registered mark GLEAN because the dominant term in the proposed mark is the entirety of the cited mark, and both parties offer Class 42 software services centered on search and retrieval functions. The key driver of the score is the close relationship between the marks themselves combined with overlapping software-as-a-service offerings delivered online to business users. Although GLEANMARK includes the additional term MARK and also includes Class 45 legal and IP-focused services, that wording is highly suggestive of trademark-related subject matter and does not meaningfully distance the commercial impression from GLEAN in the Class 42 context. On this record, a USPTO examining attorney would likely view GLEANMARK as a line extension or trademark-focused module offered under the GLEAN brand.

Similarity of the Marks

85

GLEANMARK incorporates GLEAN in its entirety as the leading and dominant element, which strongly increases similarity in appearance, sound, and commercial impression. Letter-by-letter, GLEANMARK simply appends MARK to GLEAN, creating a structure in which consumers are likely to perceive GLEAN as the source-identifying portion and MARK as a descriptive modifier. Phonetically, both marks begin with the identical single-syllable term GLEAN, and consumers often give greater weight to the first part of a mark. In connotation, GLEAN suggests collecting or extracting useful information, and GLEANMARK reinforces that same idea by implying information gathering in the trademark field rather than creating a distinct source impression. Encountered in the marketplace, GLEANMARK is likely to be seen as a specialized legal-search product or sub-brand of GLEAN.

Goods/Services Relatedness

80

The overlap in Class 42 is significant. GLEAN covers providing online non-downloadable software for searching and retrieving information, electronic documents, electronic messages, websites, and other digital content, including enterprise search engine services; GLEANMARK covers SaaS for trademark searching, clearance analysis, monitoring, portfolio management, and AI analysis of trademark and intellectual property data, plus software for generating office-action response drafts and likelihood-of-confusion analysis. Both identifications center on online non-downloadable software that searches, analyzes, retrieves, and organizes information, and both fall squarely within Class 42 software services. While GLEANMARK is narrower and legally specialized, trademark searching and analysis is still a form of search-and-retrieval software service, making the goods sufficiently related that consumers would assume a common source, especially if they believe GLEAN has expanded into legal-tech or IP search tools. The Class 45 services add some differentiation, but they do not eliminate the Class 42 overlap.

Trade Channels

70

Because neither identification contains meaningful restrictions on channels of trade, the USPTO would presume both marks move through all normal channels for these Class 42 software services. Both are delivered online as non-downloadable software and are marketed to organizations and professionals needing search, analysis, and information-management tools. The cited registration is enterprise-focused, while GLEANMARK appears targeted to trademark professionals, legal teams, and businesses managing IP portfolios; however, in-house legal departments, brand teams, and corporate knowledge-management buyers could readily encounter both. The overlap in digital marketing, SaaS procurement, and web-based product discovery materially increases the chance that the same purchasers will believe the offerings are affiliated.

Consumer Sophistication

45

Purchasers of enterprise software, legal-tech platforms, and trademark clearance tools are generally more sophisticated than ordinary retail consumers and are likely to exercise a meaningful degree of care. These services often involve demonstrations, subscriptions, internal review, and vendor comparison rather than impulse purchase. That said, even careful buyers are not immune from confusion when highly similar marks are used for related SaaS products, particularly where one mark appears to be a branded extension of the other. The sophistication factor therefore mitigates the risk somewhat but does not overcome the strong similarity of the marks and the overlap in software functionality.

Strength of Existing Mark

68

GLEAN is conceptually suggestive for software that searches and retrieves information because it evokes extracting useful material from large bodies of content. That suggestive character makes the mark registrable and still entitled to protection, but not as broad a scope as a wholly arbitrary term. There is no evidence here that GLEAN is famous in the DuPont sense, but it is a live registered mark in Class 42 and appears to function as a distinctive brand for enterprise search software. Because GLEANMARK takes the entire registered mark and adds wording that describes the applicant's subject matter, the existing mark retains meaningful strength against this particular newcomer.

Crowded Field

55

The present record does not include third-party registrations or marketplace evidence showing widespread use of GLEAN-formative marks for software or legal-tech services. Without such evidence, the USPTO is unlikely to treat GLEAN as diluted by a crowded field. At the same time, GLEAN has some suggestive quality in the search and information-retrieval space, which modestly narrows its exclusivity compared with a fully arbitrary term. In the absence of concrete crowding evidence, this factor is neutral to slightly favorable to the registrant and does not materially reduce confusion risk.

Recommendation: Significant risk of an Office Action. If you proceed, the strongest arguments are that GLEANMARK is narrowly tied to trademark-specific legal and IP workflows in Classes 42 and 45, while GLEAN is directed to enterprise-wide search and retrieval of internal digital content; your application should emphasize those specialized users, industry-specific functions, and any distinct purchasing channels. Consider refining the Class 42 identification to foreground trademark-law automation and legal-professional use, which gives the best DuPont-based basis for coexistence.

GLEAN

81/100 — HIGH

GLEAN TECHNOLOGIES, INC. — Classes 009, 042

GLEANMARK presents a high likelihood of confusion with the registered mark GLEAN. The primary driver is the strong similarity of the marks, because GLEAN is incorporated in full at the beginning of GLEANMARK and remains the dominant source-indicating element. The Class 42 software offerings are also commercially related, as both parties provide software tools involving analysis functions delivered through software platforms. Although GLEANMARK includes trademark-specific legal and IP functions and also extends into Class 45 services, those distinctions are not sufficient to overcome the similarity of the marks and overlapping software trade environment.

Similarity of the Marks

92

GLEANMARK and GLEAN are highly similar in appearance because GLEANMARK wholly contains GLEAN as its leading element. Letter-by-letter, the proposed mark simply appends the descriptive or suggestive term MARK to the entirety of the registered mark, which consumers are likely to view as a product line or extension of GLEAN. Phonetically, both begin with the identical one-syllable sound GLEAN, and that shared opening portion is typically accorded greater weight because consumers tend to notice the first part of a mark. In connotation and commercial impression, GLEAN suggests extracting or gathering useful information, and GLEANMARK reinforces that same idea while tying it specifically to marks or trademarks, making the overall impression one of a trademark-focused offering from the GLEAN brand family.

Goods/Services Relatedness

84

The relatedness of the goods and services is substantial, especially in Class 42. GLEAN covers downloadable software in Class 9 for data mining, data query, and data analysis, and Class 42 SaaS/PaaS for building applications, self-serve analysis, dashboards, reports, and custom data applications. GLEANMARK identifies Class 42 SaaS and non-downloadable software for trademark searching, clearance analysis, monitoring, portfolio management, AI analysis of trademark and intellectual property data, and generation of office-action response drafts and likelihood-of-confusion analysis. These offerings are all software-based analytical tools, and purchasers would reasonably view trademark-data analysis software as a specialized branch or vertical application of the broader analytics and software-platform services sold under GLEAN.

Trade Channels

76

Because neither identification contains meaningful trade-channel limitations, the analysis assumes the normal channels of trade for software and SaaS in Class 42. Both sets of services are expected to be marketed online through websites, SaaS subscriptions, product demos, direct enterprise sales, and digital marketing aimed at organizations seeking data-driven software solutions. Even if GLEANMARK is targeted toward legal, IP, and brand-protection users, those services still travel through the same modern software procurement channels used by analytics platforms like GLEAN. The overlap is especially meaningful where businesses, in-house legal teams, and operations teams encounter both marks in software search results, software marketplaces, or vendor evaluations.

Consumer Sophistication

52

Purchasers of SaaS platforms, trademark monitoring tools, and IP consultancy services are generally more sophisticated than ordinary retail consumers and often make considered purchasing decisions. Enterprise software buying, legal-tech procurement, and trademark services typically involve demos, subscriptions, budget review, and evaluation of functionality, which reduces the incidence of casual confusion. That said, even sophisticated buyers are not immune where the marks are this close and the services are commercially adjacent in the same software ecosystem. Here, buyer care moderates the risk but does not eliminate it because GLEANMARK strongly reads as a branded legal-tech extension of GLEAN.

Strength of Existing Mark

73

On the current record, GLEAN appears inherently distinctive for software and SaaS services because it does not directly describe building software applications, dashboards, reports, or data-analysis platforms. The term has a suggestive quality in the analytics context, evoking the extraction of insights from data, but it still functions as a source identifier rather than a generic or merely descriptive term. There is no evidence here of fame in the DuPont sense, but a live registration covering Classes 9 and 42 for analytics and software-platform offerings is entitled to the normal scope of protection afforded a distinctive registered mark. That scope is broad enough to bar junior marks that appropriate GLEAN in its entirety for related software services.

Crowded Field

58

The present record does not include third-party registrations or marketplace evidence showing widespread use of GLEAN-formative marks in software, analytics, legal tech, or IP services. Without such evidence, there is no basis to treat GLEAN as diluted by a crowded field. If substantial third-party use existed for marks built around GLEAN in adjacent software categories, the registrant's exclusive scope would narrow, but that showing has not been made here. In the absence of crowding evidence, this factor leans in favor of the existing GLEAN registration receiving a normal and meaningful scope of protection.

Recommendation: Significant risk of an Office Action. If you proceed with GLEANMARK, the strongest coexistence arguments will focus on the sharply specialized trademark and intellectual-property nature of the Class 42 and Class 45 services, the legal-professional user base, and the distinction between trademark clearance/monitoring functions and GLEAN's broader data analytics and application-building platform services. You should also consider narrowing the identification to emphasize trademark-law-specific software and legal services to strengthen the trade-channel and purchaser-sophistication arguments.

GLEAN

62/100 — MODERATE

GLEAN IP HOLDINGS INC. — Classes 042

GLEANMARK presents a meaningful but not overwhelming likelihood-of-confusion risk in view of the existing GLEAN registration owned by GLEAN IP HOLDINGS INC. The principal driver is the high similarity of the marks, because GLEAN is incorporated in full at the beginning of GLEANMARK and remains the dominant source-indicating element. The risk is tempered by the significant differences in the identified services: GLEAN covers online non-downloadable software for financial analyses and cost-saving identification, while GLEANMARK is directed to trademark searching, clearance, monitoring, portfolio management, and related intellectual property services. On balance, this is a moderate-risk filing where the mark similarity is strong, but the goods/services distinctions provide substantial room for coexistence arguments.

Similarity of the Marks

88

GLEANMARK and GLEAN are highly similar in appearance because GLEANMARK wholly incorporates GLEAN as its first five letters, with only the additional term MARK appended. In sound, consumers are likely to pronounce the proposed mark as GLEAN-MARK, making GLEAN the leading and most memorable portion, and the similarity score of 0.95 strongly supports close phonetic and visual proximity. In connotation, GLEAN suggests collecting or extracting useful information, and GLEANMARK extends that same idea into the trademark field, so the shared conceptual core remains intact. In overall commercial impression, consumers encountering GLEANMARK in the marketplace are likely to perceive it as a line extension, specialized module, or trademark-focused offering emanating from the source of GLEAN.

Goods/Services Relatedness

52

The cited registration covers Class 42 services, namely providing a website featuring online non-downloadable software that enables users to perform financial analyses and identify cost saving opportunities. The proposed application also includes Class 42 SaaS and online non-downloadable software, but for trademark searching, trademark clearance analysis, trademark monitoring, trademark portfolio management, AI analysis of trademark and intellectual property data, and office-action response drafting; it further includes Class 45 trademark monitoring, watch, searching, clearance, and intellectual property consultancy services. These offerings are not competitive in subject matter, but they are related at a higher level because both involve web-based software tools delivering analytic functionality to users. The relationship is therefore moderate rather than strong: the shared software-delivery model supports some source-association risk, while the sharply different fields of use—financial cost analysis versus trademark and IP management—materially limit that risk.

Trade Channels

58

Because both identifications involve online, non-downloadable software in Class 42, the ordinary trade channels overlap to the extent both are offered through websites, SaaS platforms, and digital subscriptions. That said, the user pathways are meaningfully different: GLEAN appears directed to businesses seeking financial analysis and cost-saving opportunities, whereas GLEANMARK targets legal, brand, and intellectual-property functions such as trademark clearance, watch services, and portfolio management. The proposed Class 45 services also introduce legal and consultancy channels that are distinct from the registrant's purely software-based financial offering. Consumers therefore may encounter both in broadly similar online environments, but typically for different business purposes and through different functional searches.

Consumer Sophistication

35

The relevant purchasers are likely to be business users, legal professionals, in-house brand managers, or operations and finance personnel evaluating specialized software and services. These are not ordinary low-cost impulse purchases; they involve subscription software or professional services tied to business compliance, cost analysis, or intellectual-property strategy, all of which tend to invite deliberation and informed comparison. Buyers in these categories generally pay attention to functionality, domain expertise, integration needs, and provider credibility before purchase. This factor weighs against confusion because the sophistication and care associated with specialized Class 42 and Class 45 offerings reduce the likelihood that purchasers will assume a common source based solely on the shared GLEAN element.

Strength of Existing Mark

55

On the present record, GLEAN is suggestive rather than arbitrary because it evokes gathering or extracting useful information from data, which has some conceptual relationship to analytical software. That suggestive quality gives the registered mark protectable distinctiveness, but not the widest possible scope of exclusivity. There is no evidence here that GLEAN has achieved fame or extraordinary marketplace recognition for the identified Class 42 financial-analysis software services, so it should not be treated as a famous mark receiving expansive protection. Accordingly, the existing mark appears to have moderate strength: strong enough that a junior user incorporating the entirety of GLEAN creates concern, but not so strong that any software-related use of GLEAN is automatically barred.

Crowded Field

45

There is no evidence in the supplied record of extensive third-party use or registration of GLEAN-formative marks for software or professional analytics services. Without such evidence, the field cannot be affirmatively treated as crowded, and the registrant retains an ordinary scope of protection in GLEAN for its recited services. At the same time, GLEAN is an English dictionary term with a suggestive flavor in analytics and information-processing contexts, which implies that similar conceptual uses may exist in the marketplace and would narrow exclusivity to some extent if proven. On this record, this factor is neutral to slightly favorable to the registrant rather than strongly favoring either side.

Recommendation: Proceed with caution. The strongest refusal risk is the mark similarity created by the complete incorporation of GLEAN into GLEANMARK, so the best coexistence arguments should emphasize the different subject matter, purchaser groups, and commercial context: financial-analysis SaaS under Class 42 for cost savings versus trademark and intellectual-property SaaS and Class 45 legal services. The application should be drafted with tightly limited identifications centered on trademark and IP functions to sharpen the distinction from GLEAN's financial-analysis software.

GLEAN

48/100 — MODERATE

Bright Uro, Inc. — Classes 009

GLEANMARK presents a moderate likelihood-of-confusion risk in view of the live registered mark GLEAN. The strongest driver of the score is the substantial similarity of the marks, because GLEAN is incorporated in full at the beginning of GLEANMARK and is likely to be perceived as the dominant source-identifying element. That risk is materially reduced, however, by the sharp difference between GLEANMARK's trademark-searching, clearance, monitoring, portfolio-management, and IP consultancy services in Classes 42 and 45 and GLEAN's highly specialized Class 9 medical software for bladder sensor data analysis. On balance, the mark comparison favors confusion, but the goods, trade channels, and purchasing conditions weigh meaningfully against likely confusion.

Similarity of the Marks

82

GLEANMARK wholly incorporates GLEAN as its first and most memorable element, which gives the two marks substantial similarity in appearance and structure. Phonetically, consumers will hear the identical word GLEAN at the outset of GLEANMARK, and the additional term MARK does not sufficiently alter the cadence because consumers often focus on the first portion of a mark. In connotation, GLEAN suggests collecting or extracting information, and GLEANMARK reinforces that same idea while adding a trademark-related reference through MARK. The overall commercial impression is related because purchasers are likely to view GLEANMARK as a line extension, sub-brand, or specialized version of GLEAN directed to marks or branding.

Goods/Services Relatedness

28

The identified goods and services are quite different in function and industry. GLEAN covers Class 9 downloadable software used to receive and analyze data from bladder sensors for monitoring bladder conditions such as pressure, volume, urine chemistry, blood, and biomarkers, which is a specialized medical technology product. By contrast, GLEANMARK covers Class 42 SaaS for trademark searching, clearance analysis, monitoring, portfolio management, AI analysis of trademark and IP data, and office-action response drafting, along with Class 45 trademark monitoring, watch, searching, clearance, and IP consultancy services. These offerings are neither competitive nor complementary in the ordinary sense, and a consumer would not naturally assume that a bladder-monitoring software company is the source of trademark legal-tech software and related IP services.

Trade Channels

32

The likely trade channels diverge significantly. GLEAN's Class 9 goods appear directed to medical or healthcare settings, device makers, clinicians, providers, or patients using specialized bladder-monitoring systems, likely through regulated medical-technology distribution channels or specialized healthcare procurement. GLEANMARK's Class 42 and 45 services would be marketed online to trademark attorneys, in-house legal teams, brand managers, founders, and businesses seeking IP management tools and legal support services. Because the same purchasers are not likely to encounter both offerings in the same marketplace context, the channel overlap is limited.

Consumer Sophistication

30

Purchasers for both parties' offerings are likely to exercise a relatively high degree of care, which reduces confusion. GLEAN's software involves specialized medical data from bladder sensors and would ordinarily be selected through informed medical, technical, or institutional decision-making rather than impulse purchase. GLEANMARK's services involve trademark clearance, monitoring, portfolio management, and legal-tech workflows, which are typically chosen by attorneys, legal operations personnel, or business decision-makers after evaluating functionality, reliability, and subject-matter fit. Under these purchasing conditions, consumers are more likely to notice the major differences in product purpose and provider identity despite the similarity in the marks.

Strength of Existing Mark

58

On this record, GLEAN appears inherently distinctive for the identified Class 9 medical software because it does not directly describe bladder sensors, bladder monitoring, or biomarker analysis. At the same time, GLEAN is an ordinary dictionary word meaning to gather or extract information, which gives it some suggestive quality when used for software that analyzes incoming data. There is no evidence here of fame, market dominance, or extensive acquired distinctiveness that would entitle GLEAN to an especially broad scope of protection across distant software fields. Accordingly, the existing mark should be treated as moderately strong, but not so strong that it automatically reaches unrelated legal-tech and IP services.

Crowded Field

55

There is no third-party use or registration evidence in the present record showing whether GLEAN-formative marks are common or rare in software and technology markets. Because GLEAN is a familiar English word with a data-collection connotation, it is plausible that similar formative marks exist, which would tend to narrow the scope of exclusivity around GLEAN. However, without actual marketplace or register evidence, that point cannot be weighted heavily in applicant's favor. This factor is therefore neutral to slightly favoring the registrant, because the record does not establish a crowded field sufficient to weaken GLEAN materially.

Recommendation: Proceed with caution. The principal risk is that GLEANMARK begins with the entirety of GLEAN, so any response strategy should focus on the sharp differences in Classes 42 and 45 versus registrant's Class 9 medical software, the distinct healthcare versus trademark-legal trade channels, and the sophistication of purchasers. A carefully drafted application identification and consistent branding that emphasizes trademark and IP functionality will strengthen coexistence arguments.

Examiner Knockout Search Report — GLEANMARK

Search Methodology

This report is based on an examiner-style knockout search of the entire USPTO federal trademark database (millions of live marks). The search followed the same multi-step methodology that USPTO examining attorneys use when evaluating trademark applications for likelihood of confusion.

Class Coverage

Filed in 2 Nice classes. Expanded to 48 coordinated classes to identify cross-category conflicts.

About This Search

This search follows the Trademark Manual of Examining Procedure (TMEP) guidelines for evaluating likelihood of confusion. Each step targets a different dimension of similarity: exact text matches, phonetic equivalents (sounds-alike), visual similarity via character overlap (trigram), and component analysis across coordinated goods/services classes. Results are deduplicated and scored using a composite similarity algorithm that considers mark similarity, commercial overlap, and class relatedness before being ranked for review.

Foreign Translation (Doctrine of Foreign Equivalents)

English mark analyzed. Foreign equivalents searched in . Step 8 discovered 215 candidate marks via translated terms.

Under TMEP §1207.01(b)(vi), if an ordinary American consumer would stop and translate a foreign word in a mark, the English equivalent is treated as confusingly similar.

Examiner Knockout Search Report — GLEANMARK

Conflict Summary

Confidence: | Execution time: 27.1s | 173 marks scored from 1237 unique results

Very High (3)

Mark	Owner	Status	Classes	Goods & Services	Risk	Why

Important Disclaimer

This report is generated by GleanMark using automated analysis of the USPTO federal trademark database (millions of live marks), domain registrar records, and publicly available web data. It does not constitute legal advice and should not be relied upon as a substitute for a comprehensive clearance search conducted by a licensed trademark attorney. Trademark law involves subjective judgment calls regarding likelihood of confusion, fair use, and distinctiveness that automated tools cannot fully assess. For important branding decisions, we strongly recommend consulting a trademark attorney before filing or launching.

Mark Decomposition

The following decomposition was used to generate search queries:

Original: GLEANMARK
Words: glean, mark
Significant words: glean, mark
Phonetic key: KLNMRK
Double Metaphone: KLNМ / KLNМ

Decomposition: AI-powered compound word analysis
